Security Solutions

Aviation

As unlawful acts appear frequenltly in crowded public places such as railway station, airports, etc., Unicomp offers sound security inspection solution combining advanced technologies like X-ray imaging, metal detection and TCP/IP networking.
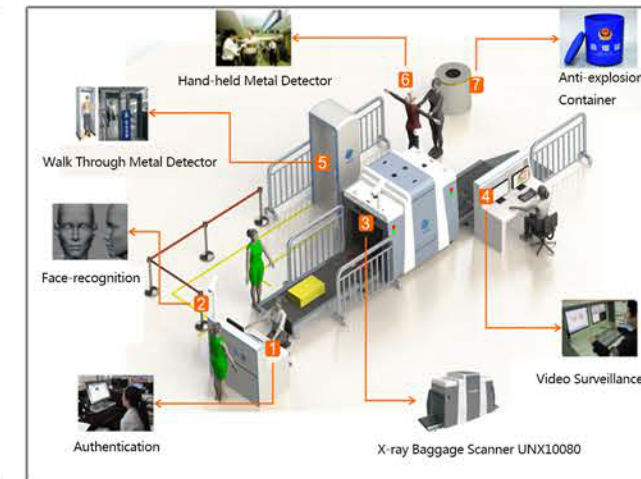

As an industry-leading company, Unicomp has its high-quality X-ray scanners guard the security of aviation and rail transportation. Its latest X-ray scanner 100100A enables three available inspection speed including standard 0.22m/s, and optional 0.4m/s, 0.67m/s. When faced with a huge crowd, it could start its hi-speed operating mode to guarantee hi-definition imaging, improve inspection efficiency so as to save space and personnel.

Rail Transportation

With confined space and huge crowd, rail transportation is exposed to potential danger. Via the inspection of passengers and baggage, the security inspection could prevent terrorism and violence from happening.

To meet this need, Unicomp offers its sound solutions to rail transportation by combining X-ray imaging, liquid/explosives detection, and TCP/IP networking. As the first company introducing network into security solutions , Unicomp forms its large security information network. Unicomp X-ray scanners is of high efficiency at offering hi-speed operating mode for crowded places.

Public Venues

Recently, as terrorism takes place frequently in large public venues, the security protection in these places is enhanced and mega project organizers all put higher emphasis on security inspection. As a specialized security solutions provider for public venues, Unicomp prevents dangers from arising by setting security checkpoint for individuals, baggage and vehicle inspection at the entrance to strengthen the security in these places.

Courier Companies

As e-commerce grows, courier industry develops rapidly. Since the frequently reported parcel explosion reflects the deficient security check in this industry, the security inspection of couriers has been paid greater attention to. The government also enforce logistics company using security inspection machine to protect security incidents from occuring. Via personnel screening, baggage scanning, Unicomp integrates security inspection machine with logistics company's pile line operation and customizes special security inspection solutions to logistics industry, which efficaciously wipe out the danger potential in postal services and logistics industry.
